

Reckon Project Plan

What is Reckon?

Reckon is a very simple single-page application. It is a web-based calculator application with basic math (addition, subtraction, multiplication, and division) and investment functions (PMT (payment), NPER (number of periods), PV (present value) and FV (future value)).

Tech stack

- React + Vite
- Plain CSS
- Node.js
- TypeScript
- Animate on Scroll
- React Router
- Financial.js (investment functions library)
- Fontawesome icons
- React Icons

Design

- Clean and simple interface
 - Modern and responsive design
 - Dark mode and Light mode
 - Animations on scroll
-

Home Page

This page will showcase what the application is about. It will include a brief description of the application, its features, and how to use it. It will also include a call to action to use the application. The home page will include the following sections:

- Hero Section
- Description Section
- Features Section
- How to Use Section
- Call to Action Section

Calculator Pages

The calculator pages will include the following:

Basic Calculator Page

This page will include a basic arithmetic calculator that can perform the following operations:

- Addition
- Subtraction
- Multiplication
- Division

PMT (Payment Investment Calculator) Page

This page will include an investment calculator that can calculate the payment of an investment. It will include the following fields:

- Rate (yearly interest rate)
- NPER (number of periods (in years))
- PV (present value)

It will give the amount in dollars (\$).

FV (Future Value)

This page will include an investment calculator that can calculate the future value of an investment. It will include the following fields:

- Rate (yearly interest rate)
- NPER (number of periods (in years))
- PMT (payment (monthly))
- PV (present value)

It will give the amount in dollars (\$).

PV (Present Value)

This page will include an investment calculator that can calculate the present value of an investment. It will include the following fields:

- Rate (yearly interest rate)
- NPER (number of periods (in years))
- PMT (payment (monthly))
- FV (future value)

It will give the amount in dollars (\$).

NPER (Number of Periods)

This page will include an investment calculator that can calculate the number of periods of an investment. It will include the following fields:

- Rate (yearly interest rate)
- PMT (payment (monthly))
- PV (present value)

It will give the number of periods in months (n).

And, that's it.
